data revolution

# JOIN THE data revolution

New for 2019, our Wireless, Information, Security & Energy platform helps you to streamline your park operations.

Using our own unique radio technology, we have created a reliable and cost effective platform to wirelessly monitor your information, security and energy without the need for WiFi or SIM.

Our secure, on-line platform allows you to analyse past and present information, plan your park more efficiently, deliver accurate billing invoices and maximise your profitability.

#### WISE INCLUDES:

- Automated Smart Meter Readings
- Live Occupancy Data
- Staff Management System
- Bespoke Security System
- Instant Security Alerts
- Equipment Failure Notifications

# WiSE Products

## SMART METER

Our Smart Meter is the ideal solution for easy and accurate utility billing. Fully automated meter readings eliminate the man hours required to collect readings and avoid missed or incorrect invoices.

### THE BENEFITS OF THE SMART METER:

- Monitor electricity, water and gas from one Smart Meter
- Reliable daily readings
- Change owner information including start and end dates
- Create invoices within our online portal
- Export data for external use

## WiSE HUB & PIR

The **WiSE** Hub & PIR package provides you with occupancy levels, cleaner complete notifications and security coverage. Located in caravans, its main purpose is to collect data and feed it back to the online portal where it can be monitored by the park.

### WHAT DOES THE HUB & PIR DO?

- Live security alerts via text, email and pager
- Remote alarm activation
- Up to 6 wireless accessories
- Anonymously monitor occupancy levels
- Keyless cleaner check-in and check-out
  - Monitor which holiday homes are ready for holidaymakers
- Battery powered modules
- Analyse all data via the online portal

## OUTDOOR SECURITY POINT

The new **WiSE** outdoor security point allows you to strategically place check points around the park for monitoring security rounds. Each point can also take up to 6 accessories.

### WHAT DO THE SECURITY POINTS OFFER?

- Weatherproof check-in points
- Can be located anywhere on park
- Monitor security rounds
- Analyse the data via the online portal

## ACCESSORIES

Each **WiSE** Hub can take up to six Bluetooth and two hard-wired accessories expanding the range of features **WiSE** has to offer.

### WHAT DO THE ACCESSORIES DO?

- **PIR Motion Sensors**
  - These act as a regular burglar alarm
  - Anonymously monitors occupancy levels
- **Separate activation point**
  - Can be situated anywhere in the caravan
  - Allows you to turn the alarm on and off
  - Cleaner check-in and check-out
- **Alert Connection**
  - Hard-wired into other systems eg. Fire Alarms
  - Receive alerts for 3rd party safety and security equipment
- **Alert Button**
  - Used as a panic button for elderly owners
  - Also used as a call button under the reception desk
  - Sends immediate alert to appropriate team

# A WiSE Park

A day in the life of a typical **WiSE** Park truly showcases the benefits of our brand-new **Wireless, Information, Security** and **Energy** platform.

Every morning, John, the park's Security Manager, logs onto the **online portal** to see if the team checked in at all the **security points** around the park during their night rounds. John likes to keep the security team accountable and can always show a report to owners if they have security queries. John also makes sure there were no **security alerts** from holiday homes that night and if anyone responded to them or not.

In Administration, Neil is raising the monthly utility bills. He can collect all the data from the **smart meters** for each unit quickly using the **online portal** and generates invoices at the click of a button, so he can send out

precise bills reducing the amount of lost energy and saving the park money.

Sarah, at reception, logs onto the **online portal** to check that all the holiday homes are ready for the holidaymakers arriving that day. She can see when the **cleaners checked in and out** of the hire fleet units giving her an accurate number of units ready for occupation.

That same morning the General Manager, Rachel, needs to know if she needs to bring in more staff and if the restaurant needs to be prepared for a busy day. The **motion detectors** in the holiday homes anonymously register movement giving you an idea of how many people are on park. Rachel, logs onto the **online portal** to see which units have detected motion over the last 24hrs so she can plan for the day ahead.
